	Examiner leszek b. kiliman	Art Unit 1794	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2-12,14-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kelso'803 (UK).

The applied Kelso'803 reference discloses a "full-cell" process of impregnation of wood. See page 1, lines 15-30. In such process pressure is applied to a wood substrate and then impregnation liquid is applied. The disclosed process uses temperature and pressure to force water based wood treatment composition. However, it would have been obvious to one of ordinary skill in the art to add a temperature element in the first step of applying pressure in Kelso'803 method since such would improve impregnation process by removing water and other impurities contained in the wood. Also, it would have been obvious to supplement water born composition with liquid resin since such would improve efficiency of the impregnation and increased amount of resin in the wood. It would have been obvious to vary temperature, pressure and time of the process since such would optimize properties of the final wood product.

Art Unit: 1794

The amendments and remarks filled by applicants on January 26, 2009 have been fully considered. The claims remain unpatentable in view of the new grounds of rejections.
